### TOUCH FREE VS. SOFT-TOUCH BRUSH

Touch Free car washes do not utilize any type of foam or cloth applicators during the cleaning process. High water pressure, and a combination of high-pH and low-pH chemicals dislodge dirt from the vehicle's surface. Sensors aid the washers' ability to follow the vehicle's contour and effectively cleanse every inch of it.

Soft-Touch Brush car washes use lightweight closed-cell foam brushes along with soap and water to clean vehicles. The system's gentle materials glide across the vehicle, spreading the soap and water solution over its surface. Contaminants are loosened and lifted away with the help of computer controlled pressure and RPM settings.

### HOW IT WORKS

- +Customer arrives
- +Customer selects their desired wash package
- +Customers pull their vehicle into a wash bay, place their vehicle in park
- +An automated system washes the vehicle
- +Customer exits the wash

Staffing: Unit can run unmanned with a daily/weekly cleanup

Best In-Bay Site Location: Convenience Store or Petrol Stations

### STANDARD COST (\$USD)

Equipment Packages: Range \$90K - \$160K.  
Promos available. Valid to US locations only.

Building Cost: Average C-Store bay is roughly 42' x 24' x 16' (900 ft<sup>2</sup>) and cost around \$600K to construct.

Reloading New Equipment Cost: Vary based on what existing equipment can be reused.  
Speak with a sales representative to learn more.

Land Cost: Vary by location and whether the site will have a convenience store.
