Next Generation Super Sealant Formulated with Apexamer[®] Technology

A cross-linking effect caused when combining multiple polymers to provide an apex level of protection to a vehicle's surface!

ProShield[®] is an ultra-concentrated super sealant formulated with Apexamer[®] Technology. It provides an "apex level of protection" as a result of combining polymers that create a cross-linking effect or "web-like application" of protection. ProShield[®] is a natural, pure surfactant that has no artificial fragrances or colors to ensure its flawless and synergistic properties.

What makes ProShield[®] a "Next Generation Super Sealant"?

Apexamer[®] Technology is the new industry standard in protection and shine. A breakthrough and proprietary chemistry that incorporates cross-linking polymers puts Apexamer[®] at the peak of performance. CSI developed this technology to increase a vehicle's hydrophobicity, durability against the elements, and protection against UV radiation. All of this is achieved without altering or damaging the surface of the vehicle.

What has been tested & true?

- Ultimate UV Protection
- Interlocked coverage that increases total surface gloss and provides longer lasting shine
- Uses web-like application to seal in added surface protection against the elements
- Ensures a drier vehicle surface to lock in the protection

Compatible with
Ultraflex[®]
System

Lustra[®]
Professional Car Care Products
Manufactured by CSI
