

## **AquaLink™** Conservation Through Innovation

### **The AquaLink Advanced Oxidation System elevates the process of water recovery to an entirely new level.**

This efficient and cost-effective method of recovering a higher percentage of water is achieved by delivering a combination of oxidants to successfully reduce surfactants, bacteria counts and other contaminants. This results in significantly reducing the need for fresh water and further minimizing sewer discharge.

- Improves the natural effects of ozone by 100%
- Reduces odor, color, surfactants, BOD
- Processed water from the AquaLink System can effectively be used for chemical delivery resulting in further reducing fresh water usage\*
- Available for both new reclaim units and retrofits, no additional power required
- Adds over 80 sf of filtering surface area with minimal maintenance
- Keeps your tunnel and equipment cleaner

\* Requires water and chemistry analysis
